

Policy for energy efficiency of JSC Macedonian Power Plants

Recognizing that the energy production sector is as well a major energy consumer, we acknowledge the need to raise awareness and change the attitude towards responsible energy use. Therefore, as a corporate socially responsible company, we feel obliged to demonstrate leadership towards rational use and management of energy resources, thus to become a positive example for our customers and business associates. In this regard, we commit to abide and respect the following principles:

- *Dedication to proper application of legal provisions for energy efficiency and preservation of the environment;*
- *Improving the efficiency of the technological processes via identification and implementation new energy efficient practices;*
- *Continuous monitoring and improvement of the energy performances of the plants and equipment;*
- *Continuous consideration of the energy performances when purchasing new equipment and services;*
- *Finding ways to save energy resources, utilize waste heat and consider introducing alternative energy sources;*
- *Continuous raising the awareness, educating and encouraging all employees to identify potentials for responsible use of energy;*
- *Continuous promotion of the measures and interventions of rational energy use;*
- *Recording, analyze and revision of data that reflect the rational management of energy resources and sharing them at all organization levels;*
- *Applying individual and collective responsibility in realization of the policy for energy efficiency;*
- *Sustainable energy use.*

Taking all above in perspective, we set a long-term goal to enlist our company among the energy efficient entities in the country with Implementation of environmental concerns practice.

President of the Management Board
d-r Hristijan Mickoski
